

Angel MedFlight

Raw Search Performance Audit

What we cover today

01**Industry context**

Air medical transport market size, demand drivers, Google Ads benchmarks for the vertical

02**Account snapshot**

90-day KPIs, executive summary, Search vs. PMax breakdown

03**Brand campaign health**

IS gaps, Brand Main Broad match leakage, competitor interception

04**Campaign and bid strategy**

All 10 campaigns, unconstrained Max Conv — the efficiency risk

05**Quality Score**

QS distribution, LP relevance gaps, keyword-level CPC premiums

06**Keyword analysis**

Scale candidates, waste, pause targets, IS opportunities

07**Landing pages**

Two pages for the entire account — a structural QS problem

08**Recommendations**

Prioritized actions, owners, timelines, annualized impact

01 / Industry context

Air medical transport: a \$7.5B market growing at 7–8% annually

Air medical transport: \$7.5B globally, \$3.3B in North America, growing at 7-8% annually

The air ambulance and medical transport market is one of the most defensible niches in healthcare services — high switching costs, regulatory barriers to entry, and life-or-death urgency driving non-negotiable demand.

\$7.5B

Global air ambulance market 2025

\$3.3B

North America market 2025 (44%)

7.8%

CAGR 2025–2033

\$13B+

Projected global market 2034

385K

HEMS patient transports in 2023 (FAA)

47%

Inter-facility segment market share

Why this matters: The market is structurally growing — demand is not cyclical. Winning in Google Ads while the market expands = compounding revenue advantage.

53.8%

Emergency response services — dominant use case (2025)

29.6%

Inter-facility transfers — fastest growing sub-segment

North America

44% market share; U.S. projected \$2.89B by 2026

Four structural forces driving sustained demand for air medical transport services

This is not a trend-dependent market. Each of these forces is structural, demographic, or regulatory — and they reinforce each other.

01 Aging population + rising chronic disease burden

60% of U.S. adults have at least one chronic disease; 40%+ have two or more (CDC 2024)

Stroke, cardiac events, and trauma — the three most common HEMS indications — skew heavily toward adults 60+. As the U.S. 65+ population grows to 73 million by 2030, demand for emergency and inter-facility transport accelerates. Angel MedFlight's fixed-wing Learjet fleet is specifically configured for critical care transport over distance.

02 Rural access gap and geographic necessity

Rural cardiac arrest survival is 30% lower than urban — air transport cuts response from 60 min to 15 min

Ground ambulances cannot solve rural geography. Air transport is not a premium option in these markets — it is the only option. The U.S. has over 46 million rural residents with limited access to Level I trauma centers. This creates durable, non-discretionary demand that does not compress in economic downturns.

03 Inter-facility transfer growth driving fixed-wing demand

Inter-facility segment: 29.6% market share, fastest growing — driven by hospital specialization

As hospitals increasingly specialize (cardiac centers, trauma centers, transplant programs), patients move between facilities far more often. Fixed-wing aircraft — Angel MedFlight's primary platform — are the preferred mode for these longer-distance transfers. The Cleveland Clinic eVTOL project and AirMed's \$50M fleet expansion both signal institutional investment in this segment.

04 International repatriation and medical tourism

International segment growing at 12% CAGR — fastest in the category

International medical repatriation is growing at 12% CAGR — the fastest segment. Bedside-to-bedside transfers from overseas start at \$25,000. Angel MedFlight's global coverage positions it directly in this high-margin segment. Insurance companies and travel assistance companies are the primary B2B referral channel — a relationship-driven buyer that responds to brand recognition and Google search.

Google Ads in healthcare: where the vertical sits, where Angel MedFlight stands

The healthcare CPC environment — and why QS and LP quality are more important than ever

Healthcare saw +18% YoY CPC increase in 2025 — the largest of any major industry tracked by WebFX/LocaliQ. The average healthcare CPC is \$5–7 for general health services. Air medical transport keywords ("air ambulance," "medical flight," "private medical transport") are specialty high-intent searches in an emergency context — CPCs of \$20–55 are structurally higher. Every QS point saved is worth more in this vertical than almost anywhere else.

Metric	Broad healthcare benchmark	Angel MedFlight account	Gap	Assessment
Avg CPC (healthcare)	\$5–\$7 general health	\$24 (Search)	–\$17+	Air med is 3–4x healthcare avg. QS discipline is critical.
Avg CPC (this account)	—	\$24 blended Search	—	Brand: \$10–17 General: \$19–28 CPC range acceptable
Avg CTR (healthcare)	5–8% healthcare (WordStream)	Not in data	N/A	Account CTR data not segmented in provided sheet
Avg CVR (healthcare)	7–10% for inquiry-focused	~7.5% Search (est.)	At benchmark	CVR competitive given high-intent emergency queries
Avg CPA (healthcare)	\$16–\$70 (general health)	\$325 Search \$179 PMax	Well above	Air med is B2B/high-ticket — \$239 CPA justified if LTV supports it
Healthcare CPC trend (YoY)	Healthcare +18% (2025)	Account CPC data: 90-day snap	Market headwind	Every QS point saved = real \$ in a rising-CPC environment
PMax adoption (industry)	13–18% of spend (industry avg)	44% of spend (this account)	3x industry avg	High PMax reliance vs. benchmark — audit carefully
Search IS (competitive set)	40–65% (well-funded accounts)	45% General 26% overall	Below target	Losing 55–74% of eligible impressions across campaigns

Fix: CPC is not unique to this account — the vertical is expensive. The leverage is QS improvement, LP relevance, and bid strategy discipline. Every point of QS improvement on a \$20+ CPC keyword saves more than anywhere else.

LEVEL

02 / Account snapshot

\$653K spend · 2,734 conversions · \$239 CPA · 26% IS

What we are building on — five genuine strengths to protect

Before the diagnosis: the account has real strengths. Level builds on these, not through them.

"Angel med flight" [EX]: \$83 CPA — proof of what's possible

QS 10, 99.2% IS, 29.84x ROAS. This keyword is the template for everything that can go right in this account — tight keyword-ad-LP alignment, exact match precision, and brand authority. It is the efficiency benchmark every other keyword should be measured against.

Brand keyword IS near-perfect across Exact match campaigns

"Angel med flight" [EX] at 99%, "angel flights" [EX] at 98%, "angel medflight" [EX] at 98%. The exact match brand structure is well-built. IS is only collapsing in Brand Main (Broad) — a structural fix, not a systemic failure.

PMax CPA of \$179 vs. \$325 on Search — significant efficiency gap

PMax is generating conversions at \$146 less than Search CPA. Whatever the algorithm is finding cross-network, it is working. This efficiency must be protected through proper governance (brand exclusions, asset audits) — not ignored.

NAAMTA Global Accreditation (4 consecutive) — a credibility differentiator

Angel MedFlight earned its fourth consecutive NAAMTA Global Accreditation in April 2025. This is one of the most recognized accreditations in air medical transport — a direct credibility signal for cost/quality-conscious referral buyers (hospitals, insurance companies, travel assistance firms) who research providers on Google.

Single, clean conversion action — form fill only

One primary conversion action with no micro-conversion inflation. Smart Bidding has a clean, unambiguous signal. 2,734 conversions in 90 days (213/week) means there is abundant data to fuel Target CPA — the prerequisite for moving off unconstrained Maximize Conversions.

"Medical flights near me" [Broad]: \$209 CPA at only 31% IS

One of the most efficient non-brand terms in the account — \$209 CPA and 20.89x ROAS — is running at only 31% IS. This is not a low-performing keyword. It is an underfunded one. Scaling this term is a week-one opportunity.

Executive summary — five findings that define this account

Critical

No Target CPA — Maximize Conversions with no guardrails

Every campaign runs Maximize Conversions without a Target CPA. At \$653K/90d and 213 conv/week, there is abundant signal to set tCPA targets. CPA varies 16x (\$83–\$1,329) — a signal of unconstrained bidding. This is the single highest-leverage fix in the account.

⚠ Every week without Target CPA costs efficiency that compounds. With 2,734 conv in 90 days, there is no valid reason to delay.

Critical

Brand Main IS: 29% — losing 71% of own brand impressions

Brand Main uses Broad match on own brand terms and captures only 29% IS. Competitors intercept 71% of branded search. Brand Exact campaigns run at 96–99% IS. The contrast is not performance — it is match type. Switching to Exact/Phrase is a week-one fix.

High

PMax: 44% of spend, 59% of conversions — but a complete black box

PMax drives \$179 CPA vs. \$325 on Search — efficient. But there is zero visibility into placements, audiences, or assets. PMax is almost certainly cannibalizing branded search without brand exclusions. At 44% of \$653K spend, the stakes of governing this correctly are high.

High

General medical flight IS: 45% — half the market going to competitors

The largest search campaign (\$235K, 90d) captures only 45% IS. 55% of eligible impressions lost — 64% to rank, 36% to budget. At \$369 CPA and positive ROAS, there is proven demand sitting on the table.

Opportunity

"Angel med flight" [EX] at \$83 CPA — proof the account can be efficient

\$83 CPA, 29.84x ROAS, 99.2% IS at QS 10. The entire brand portfolio shows what the account is capable of. The work is to extend this efficiency to non-brand terms through LP, QS, and bid strategy.

\$653K spend, 2,734 conversions, \$239 CPA — strong scale, significant efficiency gap

90 days: Jun 11 – Sep 8, 2025. Single conversion action: form fill / inquiry contact. 213 conversions/week — well above Smart Bidding threshold.

Campaign type breakdown — Search vs. Performance Max

03 / Brand campaign health

IS gaps · Brand Main Broad leakage · competitor interception

Brand IS: near-perfect on Exact, critically leaking on Broad — a structural problem

Campaign	IS	IS Lost	CPA	Spend	Assessment
[Brand]–Angel Med Flight–(EX)	99%	1%	\$84	\$4,940	QS 10. Best CPA in account. Maxed at 99%. Template for all brand terms.
[Brand][Main]–angel medflight–(EX)	98%	2%	\$122	\$3,344	Strong exact match brand. IS near-perfect. High ROAS.
[Brand][Secondary]–Angel Flight–(EX)	96%	4%	\$234	\$63,548	Well defended at scale. Largest brand spend. Good.
[Brand]–Medical Flight Cost–(EX)	96%	4%	\$865	\$8,221	IS fine but \$865 CPA — investigate conversion quality on cost queries.
[Brand]–Main–(Broad)	29%	71%	\$367	\$32,313	CRITICAL: Broad match brand = competitor interception. IS 29% for 18 months straight.

Brand Main diagnosis — why 71% IS is structurally lost and how to fix it

Root cause

Broad match in a brand campaign lets Google expand targeting beyond branded queries — into competitor terms, generic medical transport queries, and semantically related searches. QS degrades, CPC rises, IS collapses.

18-month evidence

"angel med flights" [Broad] shows IS of 29–44% every month from Oct 2024 through Mar 2026 — never clearing 50%. This is a structural steady state, not a temporary dip. Competitors are permanently active on Angel MedFlight brand terms.

The fix

Switch all Brand Main keywords to Exact or Phrase match. Add competitor brand names (Air Methods, REVA, AirMed, PHI, Classic Air Medical, Mercy Jets) as account-level negatives. Brand IS should reach 70%+ within the first billing cycle.

04 / Campaign and bid strategy

All 10 campaigns · unconstrained Max Conv · the efficiency risk

Bid strategy: Maximize Conversions with no Target CPA — unconstrained at \$653K/90d

All campaigns. No exceptions. At 213 conversions/week, the account has more than enough signal to set Target CPA targets. This is the highest-leverage fix in the account.

Current state: unconstrained

All 5 Search campaigns:	Maximize Conversions — no tCPA
PMax campaign:	Maximize Conversions — no tROAS
1 campaign status:	LIMITED_BY_INVENTORY — bid strategy mismatch
CPA spread:	\$83 (angel med flight) to \$1,329 (medical flights) — 16x range
Algorithm behavior:	Spend to budget ceiling; no cost discipline
Risk profile:	As account scales, chases volume at any cost

213 conversions/week. The Smart Bidding threshold is 50/month. There is no technical barrier, no reason, and no excuse for unconstrained Maximize Conversions at this scale.

Target state: Target CPA + portfolio

tCPA starting targets

Set tCPA = current 90-day CPA per campaign. Reduce 5–10% every 2 weeks if volume holds. Brand Exact: \$100–150. General medical flight: \$380. Medical Air Transport: \$550.

Portfolio bid strategy

Link all Search campaigns into a shared portfolio. "Medical flight" Broad pools signal with "Medical Air Transport" Exact (32 conv/90d) and "Medical Cost" (9.5 conv/90d).

PMax target ROAS

Set Target ROAS at 5x (current performance 5–7x). Lets PMax optimize within a cost constraint instead of chasing unconstrained volume.

Estimated annual impact

\$39/conv savings × 10,935 annualized conv = ~\$426K/yr at \$200 tCPA.
Conservative estimate at \$210 tCPA: ~\$254K/yr.

Estimated annual impact: ~\$254K efficiency improvement/yr at \$210 tCPA

Conservative. Does not count volume gains from IS improvement or LTV uplift from better conversion quality.

05 / Quality Score

QS distribution · LP relevance gaps · keyword-level CPC premiums

QS distribution: 18% of search spend at QS 1-4, 56% paying a CPC premium

Top QS offenders by spend — LP relevance is the consistent pattern

Keyword	Match	Spend	QS	CPA	IS	Fix
"medical flight"	Phrase	\$64,118	4	\$376	46%	LP H1 must say "Medical Flight Services." Credential, coverage, inquiry above fold on mobile.
"private medical flight"	Phrase	\$74,656	5-6	\$333	57%	Better but improvable. LP must call out private/non-emergency transport explicitly above fold.
"angel flight"	Exact	\$46,660	6	\$238	96%	Good. Push to QS 7+ with LP copy refinement.
"air ambulance"	Exact	\$17,381	5	\$414	67%	Add dedicated air ambulance LP section — separate from "medical flight" page.
"medical air transport"	Exact	\$5,918	4-5	\$396	81%	LP must use "medical air transport" language exactly — not "air ambulance." Different searcher intent.
"angel med flight"	Exact	\$4,940	10	\$84	99%	TEMPLATE. QS 10. This is what keyword-ad-LP alignment looks like. Replicate everywhere.

06 / Keyword analysis

Scale · waste · pause targets · IS opportunities

Keyword portfolio — scale, pause, and optimization signals

Top performers are brand terms. Non-brand efficiency varies widely. Two keywords should be paused immediately. Three have significant scale opportunity at proven CPAs.

Scale up — proven efficiency with room to grow

Keyword	CPA	ROAS	IS	Signal
angel med flight [EX]	\$83	29.84x	99%	Maxed
angel flights [EX]	\$227	6.94x	98%	Maxed
angel medflight [EX]	\$122	11.15x	98%	Maxed
medical flights near me [Br]	\$209	20.89x	31%	↑ Scale now
private medical flight [PH]	\$333	6.03x	57%	↑ Scale + LP fix
medical flight [PH]	\$376	4.58x	46%	↑ Scale + LP fix
angel flight [EX]	\$239	9.02x	96%	Performing
air ambulance [EX]	\$414	7.79x	67%	Scale w/ LP fix
angel med flights [Br]	\$341	7.78x	33%	↑ Scale — IS low
medical flights near me [EX]	\$209	20.89x	31%	Add [EX] variant

Pause immediately or review — waste or extreme CPAs

These keywords spend without converting or convert at CPAs that cannot be justified. Pause first, investigate second.

Keyword	Spend	CPA	IS	Action
medical flight transport [EX]	\$2,105	0 conv	82%	Pause
medical flights [EX]	\$4,650	\$1,329	74%	Pause
medical flights near me [EX]	\$1,345	\$1,345	71%	Pause
private medical air transport [EX]	\$4,801	\$1,185	83%	Pause
medical flights [PH]	\$10,433	\$596	46%	Review
private medical planes [PH]	\$4,481	\$498	61%	Review
medical air transport cost [EX]	\$3,733	\$311	81%	Review
angel medical flights [Br]	\$2,013	\$671	26%	Review

Combined pause candidates: ~\$12,901/qtr in recapturable spend = ~\$51K/year. Budget redirected to "medical flights near me" at \$209 CPA produces 61 additional conversions per quarter.

07 / Landing pages

Two pages for the entire account — a structural QS problem

Two landing pages for 10 campaigns and 29 keyword variants — a QS tax on every click

A user searching "medical air transport cost" lands on the same page as someone searching "angel flight." Google measures LP relevance per query. One page cannot be maximally relevant to 29 variants.

The problem: two generic pages for everything

/air-ambulances

\$283,679	901.9	\$315	Higher IS
Spend	Conv	CPA	Scale

/medical-flights

\$82,668	224.4	\$368	Lower IS
Spend	Conv	CPA	Scale

The /medical-flights page is \$53 more expensive per conversion than /air-ambulances. That \$53 gap, across 224 conversions in 90 days, is \$11,872 in preventable spend — per quarter.

The fix: 4 keyword-specific LPs

Level builds and hosts each LP. H1 matches the keyword exactly. Conversion form above fold on mobile. Credential and coverage language specific to the query.

"Medical flight" queries

"Medical Flight Services" — national coverage map, credentials, inquiry form above fold

"Air ambulance" queries

"Air Ambulance Services" — response time, certifications, fleet details, emergency CTA

"Private medical flight" queries

"Private Medical Flight" — private transport differentiation, non-emergency framing, cost transparency

"Medical air transport" queries

"Medical Air Transport" — commercial upgrade, ICU-to-ICU framing, route coverage

Level builds + hosts. Each page is built around the exact query — H1 matches the keyword, mobile form is above fold, credential language matches intent. Directly fixes LP Experience QS component.
