

LEVEL X ANGEL MEDFLIGHT

RFP Response & Partnership

What we heard.

- 1 Search is a critical channel** for Angel MedFlight, because users learn of their need, and immediately get to searching.
- 2 The paid search program today is outdated, and not positioned well to scale in both efficiency, and volume.** There are numerous opportunities including better using first party data, geographic optimizations, and bringing the search program into a strategy fit for 2026.
- 3 Angel MedFlight is looking for a partner who can make an immediate impact,** while also positioning the brand for **scale in the future.** Both in terms of volume available form search, but also in other platforms, marketing tactics, and strategic business growth.

LEVEL understands the complexities of this business.

We work at the intersection of **performance, creativity, lifecycle, and brand**, helping teams make better decisions as they scale.

B2B & Home Services

CPG & Healthcare

Financial Services

Most people will never need **Angel MedFlight**.

But someone, right now, **just found out they do**.

They're sitting in a hospital they didn't plan to be in, in a city they don't live in, holding a phone, *and they're searching*.

Everything we do starts there.

Our job, is when they search...

Do they see us?

What do we say?

And does it give them the confidence to call?

**But first, we must know who they
are.**

Persona 1: **Hospital Discharge Decision Makers**

"The hospital says my spouse can't fly commercial. I just need to get them home safely."

Confidential

WHO THEY ARE:

Families suddenly responsible for arranging medical transport after a hospitalization or major surgery. Typically spouses or adult children, they are navigating a stressful moment when the patient cannot travel commercially and must find a safe way home.

With discharge timelines often tight, the search begins immediately. Families rely on hospital guidance, search, and clear trust signals to quickly identify a provider that can safely move their loved one within days.

DATA SIGNALS & TENSION POINTS

- Hospital discharge planning frequently triggers urgent patient transport decisions
- Families often have 24–72 hours to arrange transport
- Limited familiarity with medical flight providers creates high uncertainty
- Families must quickly assess safety, credibility, and cost while under stress

SO WHAT? AND WHY IT MATTERS.

They are not exploring options, they are trying to solve an urgent problem quickly. **The provider that demonstrates credibility, speed, and medical readiness wins the decision.**

THEIR EMOTIONAL WORLD

- Overwhelmed by medical decisions
- Urgent and time-sensitive mindset
- Protective of the patient's safety
- Seeking reassurance from credible providers

TOP MARKETING CHANNELS

- Paid search (urgent medical transport queries)
- Hospital referral networks
- Review sites and testimonials
- Clear, trust-building website content

THEIR NEEDS:

- Immediate availability and fast response
- Clear safety credentials and medical expertise
- Aircraft and equipment transparency
- Confidence that the patient will be cared for during transport

Customer Journey: Hospital Discharge Decision Makers

Persona 2: **Rehabilitation Transfer Planners**

*"We need to move them to the best rehab center, **safely and with the right medical support.**"*

Confidential

WHO THEY ARE:

Families coordinating transfers to rehabilitation facilities after serious medical events like strokes or traumatic injuries. They often work with physicians or discharge planners to determine how to safely transport a patient across state lines.

While slightly less urgent than emergency discharge, families still move quickly by comparing providers based on clinical capabilities, safety standards, and reliability.

DATA SIGNALS & TENSION POINTS

- Many transfers involve long-distance or interstate travel
- Patients often require medical monitoring during transport
- Decisions involve both families and healthcare professionals

SO WHAT? AND WHY IT MATTERS.

They are comparing providers carefully. **The provider that shows clinical capability and reliability earns trust.**

THEIR EMOTIONAL WORLD

- Focused on recovery outcomes
- Concerned about continuity of care
- Seeking reassurance during transition

TOP MARKETING CHANNELS

- Physician referrals
- Healthcare professional networks
- Provider comparison searches
- Informational website content

THEIR NEEDS:

- Skilled medical staff onboard
- ICU-level equipment when needed
- Transparent logistics and pricing
- Clear safety standards

Persona 3: Insurance & Care Coordination Gatekeepers

*"My job is to make sure **patients get where they need to go safely and reliably.**"*

WHO THEY ARE:

Professional case managers, healthcare coordinators, and insurance representatives responsible for arranging patient transport. Unlike families, these decision makers operate within healthcare systems and must evaluate vendors against strict standards.

They prioritize providers that demonstrate reliability, accreditation, and clear operational processes they can trust repeatedly.

DATA SIGNALS & TENSION POINTS

- Transport decisions tied to care plans and insurance approval
- Vendors must meet clinical and regulatory standards
- Reliability and response time are critical

SO WHAT? AND WHY IT MATTERS.

This audience chooses providers based on **professional credibility and consistency, not marketing alone.**

THEIR EMOTIONAL WORLD

- Highly pragmatic and risk-aware
- Focused on accountability and patient safety
- Prefer trusted providers with proven performance

TOP MARKETING CHANNELS

- Professional healthcare networks
- Industry directories and certifications
- Direct provider relationships

THEIR NEEDS:

- Verified accreditation
- Reliable scheduling and logistics
- Clear communication and documentation

Persona 4: **Sudden Diagnosis Researchers**

*"We just learned my parent needs treatment far from home. **How do patients travel when they can't fly commercial?**"*

Confidential

WHO THEY ARE:

Families who have recently received a serious diagnosis requiring treatment in another city or state. At this stage, they are trying to understand their options and learn how medical transport works.

Their journey typically starts with informational search before moving toward selecting a trusted provider.

DATA SIGNALS & TENSION POINTS

- Triggered by new diagnoses or treatment referrals
- Families unfamiliar with medical transport options
- Research begins with general questions about medical flights

SO WHAT? **AND WHY IT MATTERS.**

The provider that **educates and builds trust early** becomes the provider they choose later.

THEIR EMOTIONAL WORLD

- Shocked and uncertain
- Seeking clarity and guidance
- Concerned about logistics and cost

TOP MARKETING CHANNELS

- Informational search queries
- Educational website content
- Patient stories and testimonials

THEIR NEEDS:

- Clear explanations of transport options
- Educational resources
- Transparent expectations on cost and process

Maximizing search , the first
point of interaction when
patients or loved ones are
ready to find us.

Current account structure and optimization strategy are limiting overall campaign performance

Antiquated structure

Single Keyword Ad Groups (SKAGS) limit account wide learnings & are actually **increasing costs**

Limited signal

Data optimization overindexing on unqualified data creates **short sighted** flight impact

Broad geographies

Lack of control over geographical delivery **results in ill-directed spend** across areas with high quality healthcare, or low service need

Unlocking campaign performance comes from 5 key areas

Create efficiency, maximize down-funnel effectiveness, and maximize throughput.

01

PMax

Focus on new opportunities, not campaign cannibalization

02

Restructure + QS

Move from 152 → 15 ad groups to increase campaign efficiency & shared learnings

03

Predictive signal

Train algorithms to optimize to opportunities and flights

04

GEO leverage

Push & pull spend in geo's based on opportunities & performance

05

Landing pages

Designated environments for each persona to increase CVR

When implementing change, the first rule is do no harm.

When implemented, Angel MedFlight experiences immediate benefit, with long term upside

Volume

38%

**Increase in
opportunity
volume**

Opportunity efficiency

PMax is cannibalizing other Channels

Dialing in Performance Max means separating the work it should do from the work that should be handled by dedicated Search campaigns.

Branded conversions should be attributed to branded campaigns, while relevant nonbrand queries like “medical transport state to state” should be evaluated as expansion opportunities for nonbrand Search campaigns rather than left entirely to PMax.

Once we have a stronger conversion point to optimize toward, PMax can do a better job improving the quality of YouTube, Discover, and other inventory driven conversions, while the search term report can continue to guide keyword expansion and campaign structure improvements.

Channel	Impr.	Interactions	Conversions	Cost	CPA
YouTube	22969823	307363	210.99	\$51,992	\$246
Google Search	28783	1922	97.96	\$17,711	\$181
Discover	491916	19190	43	\$9,148	\$213
Google Display Network	4847	757	5	\$1,559	\$312
Search partners	160	9	0	\$8	

Search term	CVR	Conv.	CPA
medical transport state to state	350%	7	19.21

air medical transport	14.29%	1	131.21
angel flight new york	100%	1	6.34

PMAX success is contingent on **strong, breakthrough creative.**

PMAX transformed lead quality and cost (at scale) with **better data & creative**

The challenge

In a competitive legal market with click costs often exceeding \$30, a California-based Lemon Law firm needed to drive more qualified, retainer-worthy leads without overspending. Their previous campaigns struggled with lead quality, manual bidding was inefficient, and a high-friction form made conversion even harder. They turned to Level Agency to build a scalable, ROI-focused lead generation strategy.

The approach & results

Level Agency launched a data-informed Performance Max strategy, integrating Salesforce retainer data to help Google prioritize high-quality leads. We set up custom conversion events tied to key qualifiers, applied value-based bidding to focus on high-retainer users, and used AI tools to uncover fresh keywords and audience trends. With smart automation and precise inputs, we scaled spend efficiently while dramatically improving lead quality and conversion performance.

2,637%

Increase in conversions
from Q1 to Q4

54%

Reduction in CPA

1,150%

Increase in media spend

02

Restructure + QS remediation.

The current SKAG-style setup (~152 ad groups) is built to *hack* Quality Score — one tightly-themed keyword per group should deliver QS 8–10 across the board.

BUT THE PAYOFF ISN'T THERE

QS 4

"medical flight" · \$64.6K

QS 5

air ambulance · \$17K

QS 1

"how much do medical flights cost"

Paying the cost of SKAGs *without* the benefit. Worst of both worlds.

IMPACT

Net +100 Leads from Search Per Month (after 6 months)

Why campaign consolidation works in practice

Problem: Inefficiencies between budget constraints (Google 2007*)

- **Biggest challenge:** Serving the right ad to the right user
- **Key issue:** Advertisers' budget & bid constraints impact ad delivery

Solution: Consolidation and Smart Bidding

- Uses real-time user data to optimize bidding
- Solves bid constraint issues, but budget segmentation remains a challenge

Strategic Budget Segmentation

- Not about consolidating everything into one campaign
- Identify which campaigns need finer control
- **Trade-off:** More control may reduce efficiency

*Budget Optimization in Search-Based Advertising Auctions (2007.) Jon Feldman et. All

Scenario 1:

You have \$15, and you send three representatives to auction and tell them to get as much as they can for their \$5.

Scenario 2:

You have \$15, and you send one representative to auction and tell them to get as much as they can for \$15.

More data in a smaller number of places creates efficiency

Before

152 ad groups

130 of them hold a single keyword. Budget scattered, algorithm starved.

After

Brand

Medical flight

Air ambulance

Medevac / evac / repat

15 ad groups

5–20 keywords per group, themed by intent. Full Exact + Phrase parity.

Consolidating into 15 key adgroups for both organization and performance

The proposed campaign structure simplifies the account into three core themes medical flight, air ambulance, and medevac, each organized around tightly grouped core and intent driven terms such as private medical flight and medical transportation. This consolidation creates clearer alignment between keywords and user intent, positioning the account to improve quality scores through stronger relevance, higher expected click through rates, and better landing page alignment, which should ultimately drive more efficient acquisition and improved overall performance.

STAGE 04

3.57x Improvement in return on ad spend with consolidated campaigns

The challenge

Home Alliance, an online marketplace connecting homeowners with trusted technicians, faced challenges with inefficient Google Ads campaigns, high costs, and low lead quality. Their efforts were spread thin across multiple areas, and their landing pages were not converting effectively.

The approach

We restructured Google Ads to target high-value appliance brands, consolidated underperforming campaigns to improve optimization, and introduced dynamic landing pages to boost conversions. This strategy led to a 3.57x return on ad spend!

03

Optimize to qualified leads.

Stop feeding the algorithm junk. Move bid signal onto leads your flight coordination team actually validates.

FOUNDATION ALREADY IN PLACE

Flight coordination already marks a **Qualified Lead** flag on real humans after phone contact. We build on that move optimization off **Qualified Lead**, to a proper lead score.

CURRENT LEAD → OPPORTUNITY

11–16%

CURRENT OPP → FLIGHT

75–80%

IMPACT >10% Improvement to cost per opportunity

Move from generating inquiries, to generating flights.

Good. Better. **Best.**

You are here

Raw leads

Definition: Optimizing media to the submission of an inquiry form for a valuable ask

Primary KPI: CPI to inform feasibility of the rest of the funnel

First-party qualified

Definition: Either, a prospective lead that meets a set of additional qualification criteria (ICP match), OR that + a secondary, post lead event (had a call, etc.)

This is also being tackled right now with the verified lead event work

Primary KPI: Cost Per Valid Lead

Level.Signal

Definition: Combining first-party qualified lead data, with offline data to predictably measure the likeliness of a patient taking a flight. Then, translating that likeliness into a value, and using that value to properly incentivise ad platforms to prioritize the highest value (and thus most likely to close) user targets, long before the sales cycle actually matures.

Primary KPI: Call or Lead Flight potential

The state of optimization for the account today

Level.Signal can actively predict and target users likely to generate flights

Level.Signal unlocked down funnel performance

Soaring through 1PD in Google Ads

Aviation Institute of Maintenance

<https://aviationmaintenance.edu/>

Agency Name: Level Agency

[Creative example](#)

The Challenge

AIM has seen success growing market share and revenue through the use of Google's ad products over the last two years. Addressing the increase volume requires ongoing support from admissions and partner with prospective students. AIM wanted to improve targeting to increase the likelihood that prospective students would apply and ultimately enroll - enabling increased investment in media and efficient allocation of internal resources.

The Approach

- Developed propensity model using **Level Signal** and integrated it into Google Ads for use with **Value-Based Bidding**
- Used in-market tests to measure the impact of the Signal + VBB over a full application cycle
- Scaled deployment across Google Ads

The Results

Lead volume decreased 12%, while application volume soared

- 68% increase application Rate
- 48% increase in applications
- 30% decrease in cost / application

Customer testimonial:

"Our ability to predict who is likely to apply for our programs has been a game changer. It enables us to further scale enrollment through Google by being increasingly precise with targeting."

Jason Pfaff

04

Intelligent geo strategy.

Push and pull at the ZIP/metro level based on profitability and opportunity.

Ad spend correlates strongly with **population** but not with **conversions**.

Campaigns Targeting at the State Level

Broader Targeting Leading to Overdeliver in Some Geos

We do not want to over segment. We want to be able to push and pull spend in regions based on their performance and based on events or seasonal components.

IMPACT

Creating flexibility in spend by geography allows for more opportunistic media buying based on pockets of performance.

National Spend Distribution

State level targeting is creating local inefficiencies, so we need geographic push campaigns that preserve consolidated learning while giving us more control over where spend scales.

- Current state by state targeting can miss local performance differences driven by healthcare access, seasonality, and demographic fit.
- Push campaigns give us a controlled lever to increase or decrease investment in priority geographies.
- This approach keeps the efficiency of consolidated campaigns while allowing more precise local optimization.

Geography is the biggest lever. Campaign structure is how you pull it.

Angel MedFlight's account juggles competing demands: brand defense, non-brand acquisition, two distinct buyer journeys (chronic planning vs. acute response), and meaningful geographic variance. Today's structure fragments learning across too many small ad groups. We'll employ a tiered framework that gives the algorithm room to learn while keeping strategic control where it matters.

- Core campaigns — The proven volume drivers (brand, top non-brand intent)
Funded to win.
- Push campaigns — Underperforming or under-invested segments where we want flexible dial-up/dial-down control as opportunity signals emerge (snowbird and rural geos that over-index on flights).
- Incremental campaigns — Test budget for new query categories, upper-funnel media, and geographic expansion — kept separate so experimentation never threatens core delivery.

Ex. 1:

Sturgis Motorcycle Rally

Opportunity: Sturgis attracts 100k+ motorcyclists for a long ride rally every August.

Data: Highway patrol data suggests there were:

- Injuries from crashes: 66.
- Total injuries: 80.
- Fatalities: 4–6 (official patrol data vs. broader analysis).
- Non-Injury Accidents: 27.

Key action: Placing a push campaign over top of South Dakota in August during Sturgis to ensure coverage for any families in need during/after the event

Benefit: Enhanced coverage in a low population area during a time of critical need, without disrupting evergreen campaign performance.

Ex. 2:

Overindexing in Boston

Opportunity: Limit overspend in Boston where population is high, but access to advanced healthcare is also very prevalent.

Data: Hospitals in Boston ranked among the top in the country for a variety of specialties

- Massachusetts General Hospital
- Brigham and Women's Hospital
- Beth Israel Deaconess Medical Center
- Boston Children's Hospital
- Boston Medical Center (BMC)

Key action: Placing a push campaign over non-urban & strategic areas of Boston/New England to draw budget/attention where transport is needed, while operating at a lower volume in Boston itself.

Benefit: Enhanced coverage in a low population areas where access to key Boston hospitals is more difficult,

05

Landing page performance.

Push and pull at the ZIP/metro level based on profitability and opportunity.

TODAY

0.23%

Conversion rate. The single most striking number on the scorecard.

ACHIEVABLE

1-2%+

Floor for a considered service.

IN SCOPE

Dedicated pages per theme · Insurance & cost-coverage messaging ·
35,000+ transports social proof · Form optimization for Qualified Lead ·
Ongoing CRO (not one-and-done).

One landing page per unique journey point

Repeated testing leads to sustained wins

A repeatable 4-step process from testing brief to live page.

01

Brief + strategy

Synthesize keyword intent, persona signals, and competitor pages to define the CRO hypothesis.

02

Generate copy

Generates headline variants, body copy, and CTA language tuned to the persona and keyword set.

03

Foundry builds live

Written commands deploy the page directly, resulting in new pages live in hours, not days.

04

Test and iterate

Variants run. Signals come back. Process repeats and results in live page changes deployed on the same day.

Working with (not against) compliance to move landing pages along... **Fast.**

- **Understand the regulatory landscape for medical institutions** to ensure all copy is well within legal guidelines from an external regulatory perspective
- **Know where the lines are with messaging** to avoid misrepresenting outcomes, costs, or availability
- **Stay current on ad platform policies** (Meta, Google, TikTok) specific to the medical industry to avoid disapprovals or account flags
- **Build compliant journeys** that still convert by balancing urgency with transparency
- **Experienced in multi-stakeholder reviews**, ensuring all creative and messaging clears legal, compliance, and brand review

Hospital discharge transport specialists

The hospital says they can't fly commercial. We'll get them to the right care, safely.

One call and our team handles everything — hospital coordination, insurance authorization, and bedside-to-bedside care. You focus on your family.

GETTING YOUR LOVED ONE TO CARE

How hospital discharge transport works

We're **Confidential** at discharge timelines. From your first call to arrival at the destination, our team manages every step.

WHY FAMILIES CHOOSE US

What matters most when discharge is urgent

When you have 24–72 hours to arrange transport, you need a provider that's credible, fast, and medically prepared.

Insurance specialists on staff

We research your loved one's specific flight benefits, handle all authorization paperwork, and coordinate payment directly with the health plan. Many families are surprised to learn the flight is covered.

ICU-level care in the air

Every aircraft is outfitted with intensive care equipment. Our CFRN and FP-C certified crews provide the same level of monitoring your loved one had in the hospital — from takeoff to landing.

Familiar with hospital discharge systems

We coordinate directly with discharge planners, case managers, and receiving facilities. We've partnered with 7,000+ hospitals — we know how this process works and how to move quickly through it.

Fast response, tight timelines

Our coordinators are available 24/7 and mobilize immediately. Discharge windows don't wait — and neither do we. In urgent situations, we can have transport arranged within hours of your first call.

LEVEL

Full projections & impact timeline

38% more opps at 22% lower cost per opportunity

Efficiency driven by:

- Improved conversion tracking
- Consolidated campaign structure
- Refined geo targeting

Growth Strategy:

- Reallocate budget from Performance Max → Search
- Focus on channels with stronger downstream conversion to opportunities
- Scale search-driven lead volume

Assumptions:

- Increase non-brand search impression share from ~50% → ~70%
- Expand keyword coverage to support growth

Upside Potential:

- Model does not include gains from improved signal quality
- Additional efficiency and scale likely as data improves

Performance Improvement Timeline

Week 1

Weeks 2-4

Weeks 4-5

Weeks 6+

Reset & rebuild

Baseline

Current state

- Build New Conversion Points for Google Ads Campaigns
- New Conversion point begins learning
- Begin to move keywords from PMAX and introduce brand exclusions

New Conversion Foundation

Consolidate Campaigns

>10%

In CPL Decrease

- Algorithms optimize toward old conversion event in consolidated structure
- CPA fluctuates as it begins to trend downward using maximize conversions
- Begin building down-funnel measurement framework

Effective Budget Reallocation

Down-funnel tracking

>15%

Improvement to Lead to opp

- Begin Testing new conversion points in select campaigns
- Optimize towards expected value instead of a static value

Properly Weighted Conversion Actions

Scale & refine

Full funnel

Visibility achieved

- Full-funnel optimization from click to qualified application
- Continuous improvement on lead quality signals
- Scale budget toward highest-performing segments

Optimizing to qualified outcomes

Platform opportunities that go well beyond search

While search is the first step users take in their search for a medical flight, there are multiple opportunities to create category awareness, brand affinity, and alternative conversion pathways.

Using **AI-SEO** to expand
reach and fill the funnel

AI is transforming the user journey.

It's happening now and it's happening fast.

From **Discovery**

To **Answers**

Search marketing | The new search experience

AIO dominates top of funnel, informational queries

This chart shows the % of AI generated search results across different industry categories

AI results:

- Are **weighted towards informational & question-based** queries
- Impacts prospects **beginning their medical flight journey**.

Search CTRs will decline, as AI overviews precede paid/local/organic results.

SEO prioritizes questions & quick hits more than ever

There are 0 'regular' organic results within 3 scrolls on a 32" monitor

The screenshot shows a Google search for "private medical flight". The search results are dominated by sponsored content. The first section, "Sponsored results", includes three ads from "Air Ambulance 1", "Angel MedFlight", and "EMS Ambulance". Below these, a section titled "AI Overview" provides a summary of private medical flights, stating they provide specialized, bedside-to-bedside transport for patients needing medical care during travel. This is followed by "Key Aspects of Private Medical Flights" with bullet points on types of care, medical staffing, bed-to-bed service, and equipment. A "Leading Providers & Organizations" section lists companies like Air Ambulance Worldwide, Angel MedFlight, AirCARE1, REVA, and Air Charity Network. "Factors Influencing Cost" includes distance, aircraft type, medical needs, and insurance. Finally, "Common Reasons for Usage" mentions acute illness or injury. On the right sidebar, there are three "People also ask" style questions: "Medical Charter Flights - Non-Emergency Medical Air Transport", "Angel MedFlight: Medical Flight | Flight Medical Provider", and "How Much Does Long Distance Medical Transport Cost?".

AI Search is the key to generating top of funnel attention, to expand paid media audiences.

Fill the funnel organically to nurture with paid

Each Pathfinder persona has unanswered questions in search. These posts examples capture a subset of them. Creating content like this for searches can feed paid with warmer, more qualified traffic.

Hospital Discharge Decision Makers

Searches with urgency and need credibility signals immediately.

Create content targeting:

- How much does a medical flight cost?
- How quickly can you arrange a medical flight?
- Can family members fly with a patient?

Insurance & Care Coordination Gatekeeper

Searches for accreditation and social proof signals.

Create content targeting:

- Does insurance cover medical transport flights?
- What accreditations should you require from a medical flight provider?
- How to get insurance authorization for a medical flight

Sudden Diagnosis Researcher

Clinical capability and reliability matter more than speed.

Create content targeting:

- What medical staff are on board during a medical flight?
- How to evaluate a medical transport provider's clinical credentials
- What to pack and prepare when a loved one needs a medical flight

Rehab Transfer Planner

Search broadly for education content.

Create content targeting:

- Questions to ask a medical transport provider before booking a transfer
- How are patients monitored during an interstate transport flight?
- What ICU-level equipment should be on board for a rehab transfer?

Apply critical missing schema immediately across all relevant pages on the site

Pull visitors and engagers of that content into the media workflow

A man in a grey flight suit with blue stripes on the sleeves stands in front of a white medical transport aircraft. The aircraft has a blue Star of Life on its tail. The man is smiling and has a stethoscope around his neck. He is wearing a name tag that says "MEDICAL FLIGHT" and "PARTNERS IN MEMBERS". He also has a badge that says "NRP" and "CLINICAL TEAM".

Measure the **impact.**

Level answers the question:
“If Angel MedFlight has 1 incremental dollar, where is it best placed so the program receives maximum benefit?”

Results are tracked daily and reacted to just as fast to performance trends

The team serving your business combines decades of complex business experience in a range of disciplines. But that's not what makes us powerful.

Your team combines strategic expertise focused on highly complex companies like Angel MedFlight.

From a single point of contact, you'll have access to a deep set of media, SEO & AI experts who also understand holistic marketing strategy.

The Team

Executive Strategy

Nicole Jennings
Head of Service Delivery

With 20+ years of experience, Nicole has spent her career driving growth solutions for brands across fashion and beauty, financial services, and household goods. She's been particularly focused on, and passionate about, building teams of media experts to support those brands in their digital and strategic growth journeys.

After getting her start in paid search, she went on to fall in love with all media channels, and is happy to discuss her hot takes on traditional media and the impact of AI on media management - so far. After growing up in NH, Nicole escaped the snow and lives in Columbia, SC with her husband, two kids, and mini labradoodle (aka baby #3). She loves all things pop culture - including music, movies, and books - and the celebrity gossip that comes with all of that. Her favorite brands include Peloton, Dior, and anything Caroline Hiron touches.

Bill Buchanan
President, Service Delivery

Bill joined Becker Media in 2015 bringing over 25 years of direct response marketing experience. He began his career on the agency side of the business and then moved to the client side in 1995 managing new customer acquisition for a top 10 credit card issuer. Over the past 25 years, he has managed every major direct response channel from direct mail to TV to internet. His focus has always been on driving profitable growth by optimizing the marketing spend.

Bill is a proud father of 3 teenage girls, stating he has spent more time than he wishes to admit playing dress-up and getting his hair done. He is also an avid reader of trashy military thrillers. Bill and his wife enjoy getting away for long weekends of good food and wine.

The Team

Account Management

Alicia Levey
VP, Client Services

With 15+ years of experience shaping consumer-focused marketing strategies across retail, financial services, higher education, and entertainment, Alicia specializes in bridging business goals with digital strategy. She has led global, cross-channel initiatives that drive measurable growth, from building awareness to accelerating conversion.

Known for a collaborative, partnership-driven approach, Alicia ensures every strategy is tailored to client objectives—translating vision into actionable campaigns that maximize impact and long-term value.

Luke Gracie
SVP, Client services

As Level's SVP of Client Services, Luke unifies the marketing, accounts, creative, and development department to maximize client retention and growth. He strives to position the company as industry leaders with innovative approaches and a readiness to seize the next opportunity. Luke is a hands-on, proficient leader, who is adept at prioritizing efforts and maximizing the potential of team members, while also knowing when to pull the team forward by leading with action.

The Team

Media

Tim Fitzgerald
AVP, Media Services

With over a decade of experience in the digital marketing industry, Tim Fitzgerald specializes in strategy, analysis, and innovation, leveraging his academic background in economics to distill complex business models into actionable marketing strategies. From programmatic buying to building out ecommerce practices, and now leading media strategy, Tim has consistently delivered impactful solutions across a diverse range of industries.

Throughout his career, Tim has spearheaded transformative projects, including developing a Multi-Touch Attribution tool for post-lead insights, executing global expansion strategies, and guiding clients through post-M&A go-to-market strategies. Whether crafting new product launches or navigating intricate revenue structures, he thrives on tackling tough challenges and driving meaningful results.

Jeramie Wright
AVP, Media Lead

Jeramie Wright is a seasoned digital marketing and media executive with over 25 years of experience spanning search, social, programmatic, and interactive advertising. His career in digital advertising began in 1998, during which he pioneered integrated online marketing programs for well-known brands at companies including Google, the NBA, InfoSpace, and IGA Worldwide. At the NBA, he conceived and developed interactive advertising products and campaigns for marketing partners, ultimately driving a significant increase in integrated video game advertising revenue. At IGA Worldwide, he oversaw in-game advertising sales and developed successful campaigns for major brands including McDonald's, Nike, General Motors, Ford, and Bank of America, among others.

Jeramie currently serves as AVP of Media at Level Agency, bringing entrepreneurial depth alongside his enterprise pedigree. He previously founded Honey Bear Digital in 2010 to help business owners leverage the same digital marketing technology and tactics used by major brands. He holds a Bachelor of Science from the University of Vermont.

The Team

Search Engine Optimization

Stacey Heubeck
AVP SEO

As a leader of the SEO Department, Stacey Heubeck partners with clients to design and execute holistic SEO plans aligned with their growth objectives.

From deep technical audits and GA4 implementation to content gap analyses and targeted link campaigns, every step maps directly to the metrics clients care about—traffic, conversions, and ROI. She also establishes transparent reporting and streamlined workflows so teams see progress in real time—no guesswork, just measurable performance.

Tanner Medina
Director, AEO/SEO

Tanner brings a strategic and detail-oriented approach to leading the SEO team at Level. With a passion for driving measurable results, he specializes in crafting data-driven strategies that enhance visibility, improve rankings, and deliver ROI for clients across diverse industries.

His expertise spans technical SEO, content optimization, and competitive analysis, ensuring every client's unique goals are met with tailored solutions.

With over a decade in digital marketing, Tanner combines his knowledge of SEO, CRO, and UX/UI to optimize user journeys and deliver outstanding outcomes. He excels at using data-driven insights and user-centric design to guide strategy and improve client performance. Whether conducting in-depth SEO audits or developing content strategies, his focus remains on aligning digital efforts with client goals to drive long-term success.

The Team

CRO & Data

Alex Swope
Director of Strategy & CRO

As Director of Strategy, Alex Swope is passionate about turning complex marketing challenges into clear, results-driven strategies. With over a decade of experience, he has developed deep expertise in SEO, CRO, paid social, email, and marketing automation, helping businesses across B2B and B2C industries achieve sustainable growth.

Alex has played a pivotal role in shaping high-impact marketing programs—whether refining acquisition funnels, enhancing conversion pathways, or integrating multi-channel strategies to scale performance. His ability to connect the dots between data, strategy, and execution enables clients to navigate growth opportunities with confidence. At his core, Alex is energized by problem-solving and innovation. He thrives on breaking down barriers to success, ensuring that every strategy is not only well-crafted but also actionable, measurable, and built for long-term impact.

Kallan Carter
Business Intelligence Engineer

Kallan has a strong foundation in mathematics and data analytics, with a passion for leveraging data to drive insights and optimize performance. She began her career at Level as a media analyst, immersing herself in the intricacies of digital media. During this time, she honed her understanding of media performance metrics and developed a keen eye for data trends.

Kallan then transitioned to the data team, where she now thrives as a Business Intelligence (BI) Engineer. In this role, she designs and creates dynamic dashboards to track and report on media performance, ensuring client teams have the data they need for performance analysis, reports, and regular check-ins. Her expertise in data visualization and analytics allows her to provide clients with clear insights that help optimize their media strategies.

The Team

Sales & Onboarding

Josh Muskin
VP Sales

As the Vice President of Sales & Marketing at Level, Josh brings over a decade of expertise in guiding C-Suite executives on comprehensive digital marketing strategies, messaging nuances, media diversification, and market insights. With a proven track record of executing these strategies effectively, Josh spearheads initiatives to penetrate the mass market. His responsibilities include steering marketing efforts, orchestrating inbound and outbound sales, and cultivating relationships that have resulted in a remarkable 200% year-over-year growth in net new revenue for four consecutive quarters. Continuously innovating, Josh remains committed to widening the competitive advantage that sets Level apart in the industry landscape.

Danielle Biggs
Workflow manager

Danielle is an experienced marketing professional with over a decade of industry expertise and a strong background in digital communications. As a Project Management Coordinator at Level Agency, she has spent the past three years supporting seamless client onboarding and driving operational excellence across the organization. In her role, Danielle supports the Service Delivery Team by coordinating workflows, projects, and operational processes that enable consistent, high-quality client delivery. A certified Asana Workflow Specialist, she brings a passion for organization and project management — ensuring work moves efficiently through established systems and setting both clients and internal teams up for success.

Beyond her professional endeavors, Danielle is deeply passionate about fiber arts, dedicating much of her free time to knitting, crocheting, and spinning yarn. She also enjoys attending concerts, hiking, and stand-up paddleboarding, embracing both creativity and adventure in her personal life. She resides in Bethlehem, PA, with her fiancé and two cats.

Appendix

APPENDIX: TEAM CADENCES

Proper cadence to maintain momentum in SEO

When	Weekly	Monthly	Quarterly
What		Executive Status	Quarterly Business Planning & Reviews
Who	Core day-to-day members from both AMF & partner	AMF & partner leadership teams	AMF & partner full teams
Why	Review WIP report, business updates, KPIs & deliverables	Review exec summary, analysis / insights & action plan	Quarterly business review, strategic process refinements
Output	Weekly progress update, next steps, escalation if needed	Alignment on 1-2 month priorities & execution plan	12 month (wider strategic vision) & 3-6 month (core focus areas) plan
Where	Email or virtual meeting	Virtual meeting	In-person alignment at HQ
Always On	Email, phone, slack conversations as needed for day-to-day delivery + co-shared task management		

Key deliverables we'll need from you.

Media access checklist

A custom checklist that helps us securely and efficiently collect access to your media platforms and CRM so we can start auditing, optimizing, and launching campaigns without delay.

Data questionnaire

A personalized form we send at the start of our engagement to gather essential information about your business, goals, and systems—so we can hit the ground running with smart, informed strategy.

Creative assets and guidelines

A Level-provided Google Drive folder in which you can upload your brand guidelines, logos, assets, and past creative examples. This is also a great place to share any compliance guidelines you may have.

Let's align early.

There will be fewer meetings later, promise.

These early meetings are where we build the foundation for a successful partnership. They allow us to align on goals, gather critical context, and make sure all teams are working from the same playbook. While the beginning can feel meeting-heavy, each conversation is intentional—helping us move faster and more efficiently down the line with fewer surprises and clearer direction.

Onboarding at a glance

Angel MedFlight

Level

Meetings

*sample dates

Timeline will vary based on deliverables, review times, and availability. There are many grains of salt to be served in onboarding. :)

Time management in practice

Media buyers' days are structured around client pacing.

The team ensures that every line item is on track. If something falls off track, they have the time and resources to course-correct.

Our Campaign Management Cadence

Level combines automation, tools, and AI with a rigorous human management routine to ensure campaigns remain accurate, **optimized, and continuously improving.**

Daily Operations

Ensuring campaigns run smoothly and data remains accurate

- **Platform Health Checks**

Monitor campaigns for errors and ensure conversions track correctly.

- **Budget & Pacing Management**

Adjust spend to stay aligned with monthly goals.

- **Performance Monitoring**

Review KPI shifts and flag optimization opportunities.

- **Data Hygiene**

Reconcile conversion and spend data, resolve rejected leads, and maintain tracking integrity.

- **Internal Coordination**

Manage tasks, account check-ins, and platform exploration for emerging insights.

Weekly & Monthly Optimization

Turning insights into measurable performance improvements

- **Campaign Optimization**

Bid adjustments and search term analysis.

- **Performance Trend Reviews**

Analyze results across Search, Display, and Paid Social.

- **Creative & Landing Page Testing**

Evaluate experiments and scale winning variants.

- **Budget Planning & Reporting**

Archive pacing performance, reconcile leads, and set next-month spend plans.

Quarterly Strategic Audits

Ensuring long-term growth and alignment

- Comprehensive campaign and platform audits

- Competitive benchmarking and market analysis

- Strategic recommendations for budget allocation and growth

**AI enhances
our ability to
triage issues
and identify
net-new
opportunities .**

APPENDIX: SEO AUDIT

Start with building upon the foundation

The technical basics are in place — now it's time to turn rankings into traffic and traffic into flights.

We are here

SEO fundamentals

This stage focuses on building a strong foundation for search visibility. It includes getting the technical basics right—ensuring your site is crawlable, indexable, and **structured clearly** for both users and search engines. **Keyword research and clean on-page organization** set the stage for future growth.

Traditional SEO

Once the foundation is in place, the next step is scaling visibility through content and optimization. This involves creating **keyword-aligned content**, building **domain authority**, and refining site structure to compete more effectively in search rankings. The focus is on **capturing traffic and converting interest** into action.

Traditional SEO + AI SEO

The **most advanced stage** integrates AI-focused strategies to stay visible in AI-generated answers and summaries. Content is restructured to be **clear, credible, and reference-ready** for platforms like Google SGE and ChatGPT. At this stage, success means not just being found — but being **cited as the trusted source**.

55% average AI visibility on prompt sample

LLMs are associating Angel MedFlight with the right prompts, but we're still only showing up 50% of the time. We can address this and traditional ranking gaps with the tactics outlined on the subsequent slides.

best air ambulance services	Your Brand Mentioned	Competitor Mentioned	AI G
most trusted medical flight companies	Your Brand Mentioned	Competitor Mentioned	AI G

non-emergency medical flight providers	Your Brand Mentioned	Competitor Mentioned	AI G
private medical flights	Your Brand Mentioned	Competitor Mentioned	AI G
what are the best medical flight services?	Your Brand Mentioned	Competitor Mentioned	AI G

4 high-impact opportunities uncovered

These four gaps explain why qualified searchers have a hard time finding and engaging with AMF.

1 High-volume terms sitting in tipping-point positions

'Air ambulance' (2,692/mo), 'air medical transport services' (2,477), and 'air ambulance services' (1,488) all rank between position 11 and 20, visible but far below the click curve.

2 Content doesn't address pain points of core personas

Three of four Pathfinder personas likely searches for queries AMF does not rank for; Hospital Discharge Decision Makers, Rehab Transfer Planners, and Sudden Diagnosis Researchers.

3 Blog content is stale and misaligned

In addition to bottom-funnel terms targeted on service pages, there are plenty of tipping point keyword opportunities for high-intent top and middle funnel content.

4 AI and LLM visibility is undertapped

Schema markup, FAQ structure, and credential references are the mechanism to improving AI visibility, and none are consistently applied today.

Targeted updates to improve existing rankings

9,000+ monthly searches rank between positions 11 and 20. We need to make intentional optimizations and create content for gaps.

These terms have the highest conversion intent and the widest gap between current ranking and page-one position. Each should be anchored to a dedicated service page

- medical flight transport
168 vol, currently #5.
- air ambulance services
1,488 vol, currently #11.
- air medical transport services
2,477 vol, currently #12.

AMF service page	Keywords it should own
Medical Flight Transport	medical flight (#1), medical flight transport (#5), medical flight service (#3), private medical flight (#2), medical charter flights (#64)
Private Air Ambulance Services	private air ambulance services (#9), air ambulance services (#11), air medical transport services (#12), air medical transport (#20), aero medical transportation (#10)
Long Distance Medical Transport	long distance medical flights (n/a) long distance air ambulance (n/a)
MedEvac Flights	private medevac flights (#31), aero medevac (#29), private medevac flights (#31)
ALL Location Pages	air ambulance georgia (#11), air ambulance colorado (#11), air ambulance california (#11), air ambulance arizona (#14)

Creating insurance content is a quick win

AMF ranks between positions 8 and 28 for insurance coverage queries — carrier-specific pages can own this cluster and remove the objection before it reaches the sales team.

Insurance coverage is the deciding factor for every AMF persona, yet most searchers don't know their flight is covered until they find a dedicated page. The existing insurance page ranks for broad terms but fails on carrier-specific queries that signal high intent.

A dedicated insurance hub with pages for TRICARE, Medicare/Medicaid, and major commercial carriers will capture these high-intent searches and remove cost objections before a call.

AMF service page	Keywords it should own
Insurance hub (main)	medical flight insurance (#13), medical air insurance (#5), are medical flights covered by insurance (#28), does insurance cover medical flights (#8)
United, Blue Cross, Aetna, Cigna (all would get their own pages)	does United Healthcare cover air ambulance (#27, 19 vol) does Blue Cross cover medical flights (not ranking) does Aetna cover air ambulance (not ranking) does Cigna cover medical transport (not ranking)
Medicare/Medicaid	does Medicare cover air ambulance flights (not ranking) does Medicaid cover medical transport (not ranking) Medicare air ambulance coverage rules (not ranking)
TRICARE/Military coverage	does TRICARE cover helicopter transport (#17, 43 vol) CHAMPVA air ambulance coverage (not ranking) military medical flight benefits (not ranking) VA air ambulance coverage (not ranking)

Conditions pages are underleveraged

AMF has condition-specific pages but they're templated and not optimized to capture some of the niche questions users are asking

AMF's conditions pages are clinically detailed but templated. Each page describes the service without answering the specific questions families type the moment they realize their loved one needs to get somewhere and can't fly commercially.

AMF conditions page	Keywords it should own
Stroke	air ambulance for stroke patients, medical flight after stroke, how to fly a stroke patient to rehab
Spinal Cord Injury	flying with spinal cord injury, air transport for SCI patients, how to get a spinal cord injury patient to a specialist
Traumatic Brain Injury	TBI charters (#21, 31 vol), medical flight for TBI patients, how to get a TBI patient to a treatment center
Cardiac Incident	flying after open heart surgery, medical flight after cardiac surgery
Organ Transplant	medical flight to transplant center, how to get to a transplant hospital quickly
Pulmonary	air transport for pulmonary patients
Cancer	medical flight to cancer treatment center, air ambulance for cancer patients, how to get to a cancer specialist out of state
General Trauma	air ambulance for trauma patients, medical flight for trauma care
Eating Disorder	air ambulance to eating disorder treatment center, can someone with anorexia fly commercially, how to get to eating disorder treatment far from home

Align content to core persona pain-points

Each Pathfinder persona searches differently and needs different content to move toward an inquiry. Building topical clusters around each is how AMF captures traffic it currently does not see, and builds the trust signals that convert it.

Hospital Discharge Decision Makers

Searches with urgency and need credibility signals immediately. Create content targeting 'hospital discharge transport' and 'how to arrange medical flight from hospital', 'How quickly can you arrange a medical flight?' / 'What medical staff are on the plane?' / 'Can family members fly with the patient?'

Rehab TransferPlanners

Conducting structured provider comparisons. Clinical capability and reliability matter more than speed. Create content that targets 'medical transport between hospitals' and 'long distance patient transfer.' Emphasize ICU-equipped aircraft, CFRN/FP-C certification, and bedside-to-bedside coordination.

Insurance and Care Coordination Gatekeepers

Expand insurance content into a full hub with FAQs dedicated to the major insurances that cover services. Build a dedicated accreditation page covering NAAMTA, CFRN, and FP-C: what professional gatekeepers vet before referring.

Sudden Diagnosis Researchers

Search broadly and educationally. This is the top-of-funnel audience. Create educational posts that introduce the category, build trust before the crisis moment arrives, and link naturally to service and insurance pages.

Support paid with upper-funnel content

The pathfinder personas have unanswered questions in search. These three examples posts capture them.

How Much Does a Medical Flight Cost?

Target personas: Sudden Diagnosis
Researcher, Hospital Discharge Decision
Maker, Rehab Transfer Planner

AMF currently ranks for these on an unsuitable service page. A dedicated blog post is needed to consolidate rankings, capture PAA placements, and address the primary cost objection. The post should explain that most commercially insured patients pay nothing out of pocket, detail the insurance process, and link to new insurance hub content.

Does Insurance Cover Medical Transport Flights?

Target persona: Insurance/Care Coordination
Gatekeeper, Hospital Discharge Decision
Maker, Rehab Transfer Planner

A blog post addressing insurance directly will consolidate this cluster, link naturally to the insurance hub, capture "People Also Ask" and AIO results for coverage queries, and serve as a useful resource for care coordinators and patient families.

What Happens During a Medical Flight?

Target persona: Sudden Diagnosis
Researcher, Hospital Discharge Decision
Maker, Rehab Transfer Planner

Most families arranging a medical flight have never done it before. A post explaining what to expect — the aircraft, the onboard medical crew, how the patient is monitored, and what families can do to prepare addresses the fear of the unknown. This content captures informational queries, builds trust before the crisis moment, and links naturally to service and insurance pages.

Apply critical missing schema immediately

Schema converts content authority into SERP features and LLM citations. With missing schema, Google and other LLMs have to work harder to determine what AMF is.

Schema type	Apply to	Business impact
MedicalOrganization	Homepage	Establishes AMF as verified medical entity in Google's Knowledge Graph. Required for AI Overview citation as a named medical provider.
FAQPage	All FAQ sections across service pages and blog	Direct path to Featured Snippet and AI Overview. Homepage FAQ is not currently schema-tagged.
LocalBusiness + MedicalBusiness	All state and city location pages	Drives Local 3-Pack eligibility and geo-specific Knowledge Panel.
HowTo	'How to Request a Medical Flight' process section	Surfaces step-by-step guidance in AIO and voice. Targets 'how to arrange air ambulance' queries.

This list is not all-inclusive. Basic site schema like About, Contact, etc. should and would also be applied as part of this optimization

Address technical items in tandem

Fixing these in parallel with content work compounds the impact — better pages rank faster when the technical foundation isn't working against them.

Priority	Finding	Action
HIGH	83 pages have only one internal link pointing to them — starving key content of authority	Audit internal linking and add contextual links from high-traffic pages
HIGH	No structured schema markup — AMF is invisible to AI Overviews and ineligible for rich results in a category where trust signals are everything	Implement all relevant across the entire website
MED	124 pages have linked images with no alt text — missed anchor signal and accessibility gap	Add descriptive alt text to all linked images
MED	8 pages share duplicate H1 tags — creates keyword cannibalization risk	Rewrite H1s to be unique and keyword-specific per page
LOW	76 pages have H1 tags that are too short to communicate topic relevance	Expand H1s to include primary keyword and service context
LOW	74 pages have title tags that are either too long (60) or too short (14) for optimal SERP display	Rewrite titles to 50-60 characters with primary keyword

APPENDIX: EXAMPLES OF OUR **CREATIVE** WORK

Strong creative across digital platforms make growth more efficient.

Video turns understanding into momentum by aligning story, performance, and intent.

CEPACOL - Cepacolleague

DUREX - Nothing Feels Better

LEVEL.FOUNDRY

Level.**Foundry** : Our agentic web execution engine.

Turns strategy into live web experiences, instantly.

Foundry allows teams to modify live sites using simple written commands,

What it unlocks:
accelerating prototyping, CRO, and deployment without traditional dev bottlenecks.

- Rapid landing page launches
- Live version CRO & SEO development
- Faster test velocity
- Clean developer handoff

Why it wins: Traditional web is episodic. Foundry makes it **iterative**. No long build cycles, no static experiences, just continuous improvements because **good enough isn't**.

Level.**Foundry**

Our agentic web development and prototyping tool

Where AI does the heavy lifting.

Keyword to copy

AI maps search intent directly to headline and CTA language, cutting the brief-to-draft gap from days to minutes.

Persona synthesis

Feed in ICP signals and customer data. AI surfaces the emotional hooks and objection-removal copy for each audience.

Variant generation

Generate 5-10 headline and body copy variants simultaneously. Test them all. Let data pick the winner.

CRO hypothesis

AI audits live page performance and proposes specific layout, copy, and CTA changes with conversion logic attached.

SEO optimization

Real-time semantic analysis ensures every page is structured for both search ranking and human readability.

Speed to launch

What used to take a developer 2 weeks, Foundry plus AI delivers in an afternoon. Test velocity multiplies.

Traditional vs. Level: the time difference.

Traditional development	
Brief written	Day 1
Dev ticket created	Day 2-3
Dev picks up ticket	Day 5-7
First build complete	Day 10-12
Copy/design revisions	Day 13-17
QA and staging	Day 18-20
Page live	Day 21-28

Level + Foundry + AI	
AI brief synthesis	Hour 1
AI generates copy variants	Hour 1-2
Foundry builds live page	Hour 2-4
Page live, tracking active	Hour 4-6
Variant tests running	Day 2
Winners identified	Day 5-7
Iteration pushed live	Day 7
